

QUINSEPT, INC.

PO Box 216, Lexington, MA 02173 (617) 641-2930 (800) 637-ROOT

Dear Customer:

Thank you for your interest in FAMILY ROOTS™, the leading software package for genealogy. Additional information is enclosed for your consideration.

FAMILY ROOTS is a comprehensive integrated package designed for the beginner to advanced genealogist. The program works on all computers listed on the back of this letter. The enclosed materials describe the features and genealogical forms that you can make.

FAMILY ROOTS is excellent software. It was written by a genealogist who can easily be reached in case you need help. As of this writing (September '88), over 13,000 customers are using it. You will be pleased with its functions, performance, and the clear documentation. FAMILY ROOTS was reviewed by the Book of Apple Software 1986 and received an A rating; PC Magazine, November 1983; Family Computing, April 1984; Creative Computing, May 1984; Genealogical Computing, September 1984; and PCM Magazine, September 1986; and MacWorld, February 1988 and August 1988.

Our software is not copy protected, and you may make whatever backups you need for your own use. Updates are issued periodically and are available to you as a registered user. Current prices for replacement disks and small updates are \$20 per set of program disks. We notify all users when a *significant* new update is available, and such updates are separately priced.

If you would like more information on FAMILY ROOTS, we suggest you order our trial disk with guide. This is a limited working version of the software that will let you enter information for up to 30 people and print some ancestral charts. The trial disk with guide is priced at \$9.50 to cover our cost for materials and shipping, and you may deduct the \$9.50 from your order of the full FAMILY ROOTS.

If you need even more information, we suggest you order the full program and try using it yourself, since you are protected by our 60 day unconditional money back guarantee. If you need help at any time, you may use our toll-free number above at no additional cost.

We think you'll like both our software and our service. Your order will be very much appreciated.

Steve Vorenberg

Family Roots™ will work on the following machines:

(If your computer is not listed below, we may still have a version of Family Roots for it. Call or write us to find out!)

MS DOS (IBM and compatibles. Requires 256k. Compiled BASIC.

Interpreted BASIC version available for some machines with 128k)

IBM PC, PCjr, XT, AT, Convertible	AT&T 6300	Leading Edge
Sanyo 555	Hyperion	Compaq
Eagle (MS DOS required)	Columbia	Corona
Televideo 1605	JLS	TI Professional
Datel	Blue Chip	Panasonic
Fountain	Kaypro PC	Epson Equity I, II, III
Victor 9000	Chameleon	Grid Compass
ITT Xtra (ITT DOS required)	NEC PC	Hewlett Packard Vectra
DEC Rainbow 100	Tandon	Sperry
Tandy 1000, 2000, 3000		
Zenith Z-100, Z-150 (ZDOS or MSDOS required)		

Apple II series: DOS 3.3 and ProDOS

II+*, IIe**, IIe enhanced, IIc, IIgs, compatibles including Laser 128*, Franklin*, Apple III (in emulation mode)

Apple Macintosh (This version of Family Roots written in C programming language)

Macintosh 512k	Macintosh 512k enhanced	Macintosh Plus
Macintosh SE	Macintosh II	

TRS-80 Model IV (requires TRSDOS-6)

CP/M 2.2 or CP/M 86 (requires Microsoft BASIC interpreter)

Kaypro	Xerox 820	Access
Morrow MD2/MD3	Televideo	Visual 1050
Epson QX10, QX16	Osborne Executive	
DEC Rainbow 100	DEC VT-180 (Robin)	
TRS-80 Model II, Model 12 (requires Pickels & Trout CP/M)		
Heath (requires Magnolia drives and CP/M 2.2)		
Sanyo 1000 (customer will need to send us a formatted disk)		

Commodore 64 and Commodore 128 (two distinct versions)

Atari ST We do not have a version for the Atari ST, but Family Roots will work on this computer using either of two emulators. They are pc-ditto (520ST or 1040ST) for the MS-DOS version of Family Roots, and Magic Sac Plus (1040ST only) for the Macintosh version of Family Roots.

Family Roots does *not* work on the following machines:

Coleco Adam	TI 99	NEC (CP/M)	Osborne I
Oltrona Attache	Apricot	Superbrain	TRS 80 Color Computer
Macintosh 128k	Atari 800	Commodore VIC 20, Plus 4, PET, Amiga	

* DOS 3.3 only, requires 64k

** requires 64k for DOS 3.3, 128k for ProDOS
